Summary

Student in my last year of high school. With solid knowledge of web development, I acquired a solid foundation that allows me to tackle technical challenges and find efficient solutions through programming.

My main objective is to acquire practical experience in the organization and collaboration of teams in the IT sector, starting from lower positions in the hierarchy, since I believe that is the best way to understand the ins and outs of the industry and build a solid foundation for my future.

I am a responsible and result-oriented person. My teamwork mentality, combined with my attention to detail and problem-solving skills, allows me to face challenges with confidence and obtain satisfactory results.
